

What is a GASLOW?

Low Level Indicator

The Gaslow gauge gives visual warning of low gas levels when gas is being consumed by your appliance.

Green

No worries, gas supply adequate at current rate of use.

Yellow

Early warning, keep an eye on your gas supply.

Red

Gas almost empty and ready for changing.

Leak Detector

Leak testing is quick and easy as follows:

Ensure all gas appliances are turned OFF.

Turn ON the gas at the cylinder, the window will show GREEN.

Turn OFF the gas.

Watch the gauge, if the RED sector appears in the window within the specified time, there is a leak.

Should you see RED, check your system and locate the gas leak.

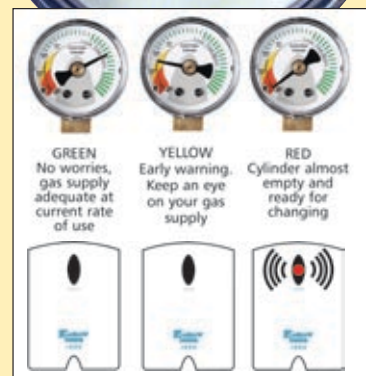

What if you forget to go outside and check your Gaslow?.... You run out of gas!

Not any more – Fit a Gaslow Electra and see the light!

Now we have an Gaslow Electronic gauge which switches a warning light on inside your Caravan or Motorhome to tell you when you are running low on gas.

Be sure.... Be safe.... Fit a Gaslow!

GREEN
No worries, gas supply adequate at current rate of use

YELLOW
Early warning. Keep an eye on your gas supply

RED
Cylinder almost empty and ready for changing
